A book for the modern developer

A developer-focused book, to help you leverage all the relational and post-relational features that Azure SQL has, to easily create fast, scalable and secure applications

Lots of samples and discussions taking into account different languages:

Python, .NET, Java
...and more!

Visual Studio LIVE!
EXPERT SOLUTIONS FOR ENTERPRISE DEVELOPERS

Introduction

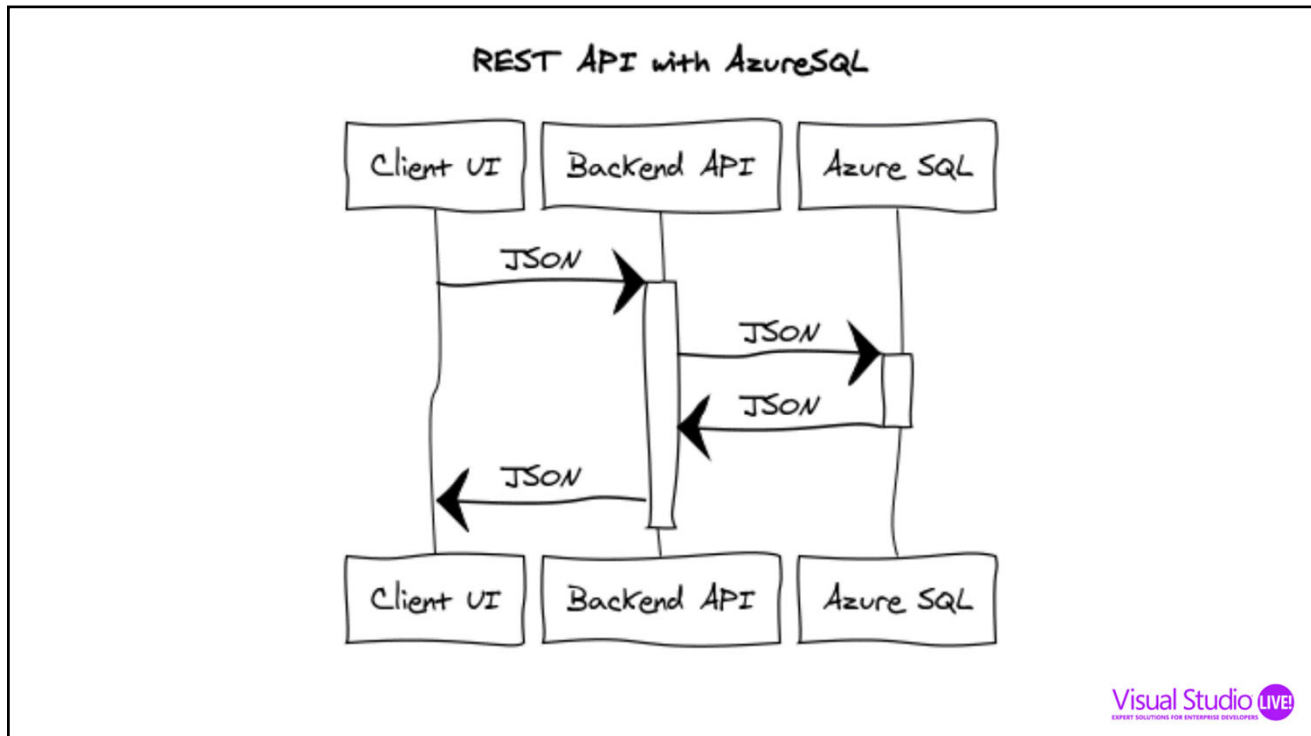

What is Jamstack?

Jamstack is an architecture designed to make the web faster, more secure, and easier to scale. It builds on many of the tools and workflows which developers love, and which bring maximum productivity.

The core principles of pre-rendering, and decoupling, enable sites and applications to be delivered with greater confidence and resilience than ever before.

Explore more of the benefits of Jamstack.

Sample Application

The screenshot shows the TodoMVC website. It features a large red checkmark icon and the text "TodoMVC Helping you select an MV* framework". Below this, there are links for "Download", "View on GitHub", and "Blog". The page is divided into two main sections: "Introduction" and "Examples". The "Examples" section lists various frameworks and languages, including Backbone.js, AngularJS, Ember.js, KnockoutJS, Dojo, Knockback.js, CanJS, Polymer, React, Mithril, Vue.js, Marionette.js, Kotlin + React, Spine, Dart, GWT, Closure, Elm, AngularDart, and TypeScript.

The screenshot shows the Todo-Backend website. It features a large red checkmark icon and the text "Todo-Backend a shared example to showcase backend tech stacks". Below this, there is a paragraph of text explaining the project. The page is divided into two main sections: "Introduction" and "Examples". The "Examples" section lists various frameworks and languages, including Backbone.js, AngularJS, Ember.js, KnockoutJS, Dojo, Knockback.js, CanJS, Polymer, React, Mithril, Vue.js, Marionette.js, Kotlin + React, Spine, Dart, GWT, Closure, Elm, AngularDart, and TypeScript.

Why Azure SQL Database?

We want to be ready for anything, so we need flexibility AND security, performance, data consistency:

- Multi-model support (JSON / Graph / GeoSpatial)
- In-Memory Lock Free Tables
- Ledger Tables
- Row-Store and Column-Store on the same table
- Encryption (Column/Database/Transparent/Full)
- Row Level Security
- Replicas / High-Availability

Install Azure Functions Core Tools

Make sure you have Node installed

```
npm i -g azure-functions-core-tools
```

<https://docs.microsoft.com/en-us/azure/azure-functions/functions/functions-run-local>

Install Azure Static Web App CLI

Install Azure Static Web Apps CLI

```
npm install -g @azure/static-web-apps-cli
```

<https://docs.microsoft.com/en-us/azure/static-web-apps/local-development>

Sample Vue Client

```
curl https://raw.githubusercontent.com/vuejs/vuejs.org/master/src/v2/examples/vue-20-todomvc/index.html -o index.html
```

<https://vuejs.org/v2/examples/todomvc.html>

This sample uses local storage to save to-do items

Next steps

1. Create an Azure Function to implement the TodoMVC API Specs
<http://www.todobackend.com/>
2. Update the Vue Client to use the REST API instead of local storage
3. Deploy the full-stack solution to Azure Static Web Apps
4. Change the API to save data into an Azure SQL DB
5. Update CI/CD pipeline to also deploy and update the DB
6. Add Authentication support
7. Celebrate!

Sample Repository

- Fork the repo:
 - <https://github.com/Azure-Samples/azure-sql-db-fullstack-serverless-kickstart>
- Then

```
git clone https://github.com/.../...kickstart
```
- Three branches:
 - v1.0: Very basic kickstart project, no database connectivity
 - v2.0: Full project, with database connectivity and CI/CD pipeline
 - v3.0: End-To-End with also Authentication support!

Why Azure SQL DB Hyperscale?

- Separation of compute & Storage.
- Compute with Non-covering SSD cache
- Externalized log service.
- Paired page servers , fully covering SSD
- Redundant data and log in Azure Storage
- 0 to 4 secondary HA replicas
- Higher SLA with HA replica
- 0-30 Named replicas for read scale.
- Backup/Restore via snapshots
